The files would take another 5 minutes to download. After months of searching, Sophia was just minutes away from getting the classified information she needed to free her brother.

Sophia's heart pounded as she stared at the screen. Her brother, Alex, had been wrongly accused of stealing government documents, and she was determined to clear his name. At just 12 years old, Sophia was a computer genius, and she had spent countless nights hacking into various systems, careful to cover her tracks. Tonight, she had finally hacked into the secret organization's database that framed Alex. The files were downloading, and her laptop screen displayed a countdown: "4 minutes remaining." She had locked the door of the government building that she had snuck in to, but guards could walk in on her at any moment. "3 minutes remaining." Sophia thought of Alex, remembering their fun times together playing video games. She missed him and couldn't wait to see him smile again.

"2 minutes remaining." Suddenly, a noise startled her. It was just a cat. She sighed in relief. "1 minute remaining." Finally, the download completed. Sophia quickly transferred the files to a secure drive and shut down her computer. She had come so far and couldn't afford any mistakes now.

The next morning, Sophia skipped school and went straight to the local news station. She showed the files to a reporter covering Alex's case. The reporter was amazed and promised to investigate.

A few days later, the news broke. The real thief was exposed, and Alex was cleared of all charges. Sophia's bravery and skills had saved her brother.

When Alex was released, he hugged Sophia tightly. "I knew you could do it," he said, tears of joy in his eyes.
